

# Professional Course in International Forest Governance

20.07 – 07.08.2020, Freiburg, Germany

CHAIR OF FOREST AND ENVIRONMENTAL POLICY

## Good forest governance

Is widely recognized as fundamental to achieving conservation and sustainable management of forests. However, the complexity and deficiencies of forest governance present practitioners and policy makers with many great challenges.

## Objectives

Take part in our course lead by renowned experts in the field of international forest governance and

- Learn about the latest governance processes;
- Network with experts and practitioners by engaging in our interactive learning program;
- Benchmark yourself and earn a Qualified Participation Certificate;
- Learn about diplomacy in international forest negotiations;

## About the course

- Our course strongly emphasizes problem-oriented learning, and draws from contemporary and relevant cases;
- Participants will be introduced to concepts of international governance, discussing power, democracy, participation and policy pathways;
- The normative ideal of good governance will be critically examined, as will the challenges it faces in the real world of international forest governance;
- We will explore the role of public, societal and private actors, including the roles of key international governance processes and actors, and of non-state and market mechanisms (e.g., forest certification);
- We will play an operational game to consolidate both theoretical and empirical understanding;

## Target audience

- Mid-term career consultants and land-use professionals;
- International graduate students;
- Young scientists working in the field of forest, agricultural, and environmental sciences, geography, rural development, land use planning, landscape ecology and other related fields of natural resource management;

The training is open for **applications from all countries.**
